[6] advantages at a glance

1

Easily recyclable (100% polyolefin)

Replay is an artificial grass backing, made of 100% polyolefin and can therefore be more easily recycled. After years of playing fun, it is easily removed, separated and shredded. The granulate can then be used for new products.

2

Child- & petfriendly (EN 71-3 cat. 3)

The artificial grass is child-friendly and safe for pets, and has been tested to the strict EN 71-3 category 3 standard. Play carefree with the knowledge that the grass is free of harmful substances and meets strict safety standards.

3

Flexible backing with excellent bonding properties

The lack of a latex backing ensures optimum strength. It provides a flexible backing that has excellent bonding properties. Independently conducted tests according to EN 12228:2013 Method 1 prove this.

4

Improved water permeability (EN 12616:2023)

Clever engineering has taken the water permeability of Replay products to the next level. During extensive testing, results showed a substantial optimisation compared to a regular backing.

5

Closed-cell coating

Replay backing has a closed-cell coating that prevents urine from being absorbed. This means the grass does not retain unpleasant odours and is easy to clean. Enjoy a fresh and hygienic play environment for both children and pets.

6

Incredibly strong pile anchorage

The unique composition of our Replay products makes them unprecedentedly strong. Through extensive independent testing, our artificial grass proves to meet the highest standard. As a result, the product offers excellent pile anchorage (>25N, ISO 4919:2012).
